

MainWindow::MainWindow

MainWindow::on_Refreshbutton_clicked

MainWindow::refresh

```
graph LR; A[MainWindow::MainWindow] --> C[MainWindow::refresh]; B[MainWindow::on_Refreshbutton_clicked] --> C;
```

The diagram illustrates two separate calls to the `refresh` function within the `MainWindow` class. The first call originates from the `MainWindow::MainWindow` constructor, and the second call originates from the `MainWindow::on_Refreshbutton_clicked` event handler. Both calls are represented by blue arrows pointing to the `MainWindow::refresh` function block, which is shaded gray.
